SafeSpin® opening technology

SUR Lock technology

Coated blade

All-weather grip

Fire Starter

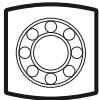

MOLLE compatible sheath

Blade Flipper opening technology

G10 handle

Ball bearing technology

Blade is titanium coated

Lightweight design

Knife has a reversible clip

Diamond coated

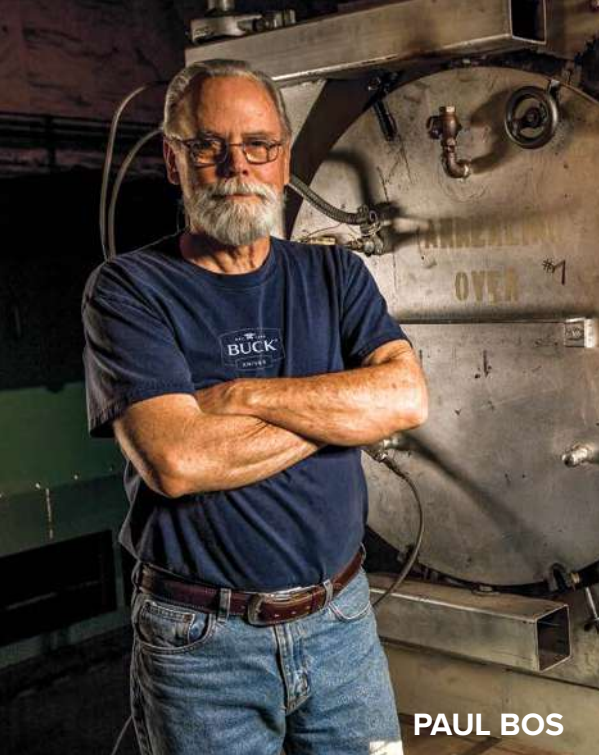

Buck Classic

# FOREVER MEANS FOREVER

*At Buck, we guarantee our knives forever because we believe in the integrity of our products.*

It was the philosophy of our founder, Hoyt Buck, who pioneered our Forever Warranty and we continue to pass it down with each generation. Complete warranty information is on our website at [www.buckknives.com](http://www.buckknives.com).

PAUL BOS

# PRACTICES

*“Paul Bos dedicated over five decades to dialing in and perfecting our heat treat process. The proper heat treat is critical to ensure the best balance between hardness for edge retention, ductility and strength for rugged use, and optimization for corrosion resistance. We still rely on Paul’s expertise today and religiously follow the time-tested formulas he pioneered.”*

*~ CJ Buck, CEO and Chairman, Buck Knives*

## EDGE SHARPNESS & HEAT TREAT

## CERTIFIED EDGING PROGRAM

## QUALITY ASSURANCE COMMITMENT

Buck is a market leader in edge retention thanks to our steel selections and proprietary heat treat process pioneered by Paul Bos, whose heat treating system has proven to be the best in the business. Each blade is put through a rigorous heat treat process and quality performance test, then is tempered to the appropriate Rockwell Hardness through a heating, freezing, and reheating system. This process, along with attention to detail through grinding and hand edging, is the foundation of our Edge2X™ technology. This gives you longer edge life, ease of resharpening and a blade that will not fail you. This process occurs on-site at Buck Knives.

Our blades are hand sharpened by skilled operators who have completed a rigorous training program that meets ISO standards.

Buck Knives takes every possible measure to ensure our products are reliable and durable. Each knife is inspected and tested for quality. Buck has earned its reputation with the quality of our materials, expert craftsmanship and attention to detail.

# THE STEEL

*Like most things, when it comes to knives, what you end up with is determined by what you start with. We create the best blades in the business by starting with the best raw materials in the world.*

Each type of steel is carefully chosen by defining characteristics that allow it to function in unique ways. We have perfected the art of finishing blades with specific combinations of hardness, corrosion resistance, and edge retention through our famous heat treating methods. The type of steel used for our blades is very important to the function of each knife. Please see our steel chart below to determine which steel is best for intended use.

This premium-powdered steel has the same edge retention as S30V but with properties that allow it to resharpen easier. This would be appropriate for the adventure hunter who will be miles away from camp and intends to skin multiple animals and resharpen in the field.

**Rc 59-61**

Small grain structure with a high carbon content has allowed this powdered steel to become the industry standard by which other super steels are compared with. With our BOS heat treat process, the Rc 59-61 steel outperforms other steels in edge retention, ductility, and wear resistance. This steel takes a beating and holds an edge for a long time. The properties that allow it to hold an edge also slow the sharpening process. S30V is perfect for somebody who does not want to have to sharpen in the field because it will not be needed. If your goal is to field dress and skin an elk, or get through tough daily chores without having to resharpen, S30V is your best choice.

**Rc 59-61**

The addition of Molybdenum to a standard 440C recipe allows this stainless steel to have properties that show an increased level of toughness (ductility) and wear resistance. The carbon content of 154CM is a jump over 420HC which results in giving up a little corrosion resistance to get durability and better edge retention. This steel is best suited for knives that will see hard use as a tool.

**Rc 59-61**

This martensitic stainless steel with its hardness at an Rc of 58-60 results in a good balance between edge retention, amazing corrosion resistance, and ease of resharpening. This steel is a good choice for every kind of knife from hunting and everyday carry, to kitchen cutlery. This high value steel will live through years of service and edge maintenance.

**Rc 58-60**

This high carbon spring steel is a good choice for applications that require impact loads and extreme bending. Our Compadre Froe and Axe are good examples of this type of tool. At Rc 57-58 the steel is not brittle. It will bend and flex back to original shape while still remaining hard enough for good edge retentions. To remedy this, all of our 5160 blades are coated to prevent rust.

**Rc 57-58**

# BUCK KNIVES & TAYLOR GUITARS

*Buck Knives, leader in sports cutlery, is dedicated to providing high performance products of uncompromising quality while preserving resources for future generations.*

Buck Knives is excited to continue the partnership with Taylor Guitars, one of the world's leading manufacturers of premium acoustic guitars, and take part in their efforts using a sustainable supply model for genuine ebony handles on our key heritage products, the 110 Folding Hunter®, the 112 Ranger®, the 055®, and the 113 Ranger Skinner.

Ebony wood was originally introduced on the 110 and 112 models in the 1960's, but in the 1990's, federal regulations on endangered woods led Buck to utilize a resin treated wood. Harvested under Taylor's thriving conservation project, Buck has again employed the use of ebony, a natural material with beautiful grain patterns that provides customers with a nearly indestructible knife handle.

*See ebony products on  
pages 12-15, 18 and 44.*

# IN-HOUSE CERAKOTE®

*Buck's in-house Cerakote® coating capabilities help control quality and lead time on a variety of different products. Offering this corrosion and abrasion-resistant coating improves physical performance properties and increases customization color options on blades, handles, and hardware.*

## WHAT IS CERAKOTE®?

Cerakote® is a Polymer-Ceramic Composite coating that can be applied to metals, plastics, polymers and wood. The unique formulation used for Cerakote® ceramic coating enhances a number of physical performance properties including abrasion/wear resistance, corrosion resistance, chemical resistance, impact strength, and hardness. Cerakote® ceramic coatings utilize state-of-the-art technology to out-perform any competitive coating in both laboratory settings and real world applications.

# HUNTING

# THE 110 FAMILY

*The 110 Folding Hunter® is an American icon that revolutionized the industry with its breakthrough folding locking system.*

Renowned for durability, reliability, and elegant simplicity, the model 110 has become one of the most imitated knife designs of all time. Buck is proud to offer modern twists to the classic, including lightweight options, upgraded steel options, and a variety of color options.

# SLIMS

*Modern twists to the classics, these 110 and 112 counterparts possess the same traditional features, but were designed as a solution for everyday carry.*

Heavy bolsters and handles were replaced with lightweight options to decrease weight and thickness. A deep carry pocket clip was added for convenient carry. Offered in 420HC and S30V steel, the blades feature a thumb stud for easy one-hand opening.

# SPRINTS

*Utilizing ball bearing technology, the Buck Sprints are designed for smooth and efficient opening with a reduction in friction for rapid blade deployment.*

A sturdy liner lock secures the blade while in use. Available in a variety of different handle materials, these knives feature a convenient deep pocket carry clip for easy carry.

# ASSISTED OPENERS

*Buck's collection of assisted opening knives operate with Advanced Spring Assisted Performance (ASAP) Technology which utilizes a spring blade pivot to assist in the deployment of the blade once opening has been initiated.*

Each assisted opener safely locks open and incorporates a safety lock to prevent accidental deployment, providing a high measure of safety in addition to a convenient design for true one-hand opening and closing.

*The sale of automatic knives is federally regulated. See page 83 for details.*

**THE RAPIDFIRE** features a dual action opening system for automatic or non-automatic deployment. The knife can be opened manually like a standard liner lock using the thumb surface. The blade locks open in this position and closes as you would a standard liner lock. The thumb surface on the blade can also be removed to show a thumb hole for easy, non-auto deployment. For automatic opening use your thumb to move the launch button upward toward the spine of the knife. The launch button activates the release mechanism that rapidly opens the blade to the locked open position.

Knife laws and regulations can vary significantly from location to location. As such, certain styles, sizes and blades may not be permitted in certain locations and areas. Buck Knives produces many different types of knives for a wide variety of legitimate everyday use. However, due to the complex and ever changing nature of knife laws and regulations, it is not possible for Buck Knives to be aware of specific prohibitions in areas where its knives may be purchased, carried or used. It is the responsibility of the buyer/user to investigate, understand and comply with any and all laws and regulations that may apply to his or her area. The buyer/user is solely responsible for any claims arising from violations of these laws or regulations or any unintended use or misuse of the product.

The sale of automatic knives is federally regulated. Always check permissibility within your state or locality as non-federal personnel may be precluded from ownership or use by state laws. NO EXCEPTIONS WILL BE MADE. Purchase of automatic knives must be preceded by the submission of an Automatic Knife Acknowledgement Form. Shipping of Automatic Knives: Automatic knives shipped by Buck Knives, Inc will be sent via common courier and CANNOT be shipped by the U.S. Postal Service. All returns of automatic knives must be shipped via common courier as well, and not by the U.S. Postal Service. Our policy requires that all automatic knives require a signed Automatic Knife Acknowledgement Form.
